

Blood Simple

“Decoding your blood drop by drop”

Blood results are hard to interpret, and having results out of range can be scary.

Blood Simple is here to help you understand all your results. It provides simple information about all parameters measured, descriptions of potential diseases linked to abnormal values and scientific references in case you want to learn more.

Your privacy is preserved as no data extracted is stored on a central server.

your blood test results

Nota bene: if one of your results was not extracted properly, you can modify it using the  icon.

Personal information:

Age: Male. Sex: 35. 

Results display:

☒ all ☐ abnormal values only

Complete blood count 			
Hemoglobin	15	14-16 %g	Hemoglobin is the main component of red blood cells (erythrocytes). It is a protein containing iron which binds to oxygen.
RBC count	5	14-16 %g	Red blood cells carry oxygen throughout the body, which powers the cells.
MCV	72	80-99 fl	Mean corpuscular volume is the average size of the red blood cells.

Glucose

Inside the cell, the glucose acts as an energy source as it undergoes the process of glycolysis. Properly maintained glucose levels are necessary for normal function in a number of tissues, including the brain, which consumes approximately 60% of blood glucose.

Pancreatitis

Pancreatitis is inflammation in the pancreas. Inflammation causes swelling and pain. The pancreas is an organ sitting between the stomach and the spine. It is involved in digestion and regulating the blood sugar (glucose).
